

Environmental Statement

Muir Construction Ltd is a major building contractor based in Scotland. We recognise that we play a significant part in developing the built environment within our area of operations and we are committed to a programme of continuous environmental improvement. This includes working courteously in communities to build, strengthen and protect our reputation and long-term relations. In addition, the company strives to reduce the risk of pollution to the environment and ensure that it complies with all relevant legislation and other requirements to which it subscribes.

The Environmental Policy is assured through development and implementation of a formal documented QHSE System. The System has been designed to meet the requirements of BD EN ISO 14001:2015 and is sufficiently flexible to meet the differing contractual requirements of all our customers and any statutory and regulatory requirements.

The specific aims of Muir Construction Limited's Environmental Policy are as follows:

- Minimise the environmental impact of our activities by reducing the amount of construction, demolition and excavation waste going to landfill
- Operate an intelligent procurement process selecting where possible the materials and services that are less damaging to the environment
- Reduce environmental pollution through reducing the effects of noise, dust disturbance and public inconvenience from our operations

In addition, we aim to ensure a level of understanding of the environment issues amongst staff, clients, sub-contracts and suppliers as well as any other party affected. We also aim to raise awareness in partners of their impact on and responsibilities to the environment.

This Policy shall be reviewed at regular intervals to ensure that it continues to be relevant and appropriate to the company's activities.

Alan C Muir
Joint Managing Director
